

**Department of Defense  
Fiscal Year (FY) 2014 IT President's Budget Request  
Department of the Army Overview**

FY13 to FY14 Comparison (\$M)	FY2013	FY2014	Delta	FY13/FY14PB Comparison (\$M)	FY2013	FY2014	Delta
<b>PB FY2014:</b>	9,811.701	9,725.381	-86.320	<b>PB FY2013:</b>	8,912.804	8,782.843	-129.961
				<b>PB FY2014:</b>	<u>9,811.701</u>	<u>9,725.381</u>	-86.320
				<b>Delta:</b>	898.897	942.538	
<b>Explanation:</b>	<p>The total change in funding from FY13 to FY14 in the FY14 President's Budget was a decrease of \$109M. The decrease was the net result of decreases in research and development funding, maintenance, and military construction that were partially offset by increases in procurement funding. The major decreases occurred in the following programs: Global Combat Support System-Army (GCSS-A), Integrated Personnel and Pay System-Army (IPPS-A), Army Tactical Command and Control System (ATCCS), and the Maneuver Control System (MCS).</p>			<b>Explanation:</b>	<p>FY13 – The total change in funding in FY13 between the FY13 PB and the FY14 PB is an increase of \$793M, about nine percent. The increase was due mainly to increases in reporting military personnel costs for IT and increased procurement costs.</p> <p>FY14 – The total change in funding in FY14 between the FY13 PB and the FY14 PB is an increase of \$814M, about nine percent. The increase was due to expanded reporting of military personnel costs for IT and increased funding for working capital fund resources.</p>

**Executive Summary**

Enhancement without Major Redesign

In 1998, the Army began upgrading the M1A1 series Abrams main battle tank to the M1A2 series. To the casual observer, the Abrams did not change drastically. However, to the combined arms community and military planners, the improvements greatly enhanced the platform's capabilities, in particular its lethality, while not impacting the tank's overall design.

Similarly, planned modernization efforts will incrementally improve the Army's network to achieve LandWarNet 2020 and Beyond. Over the last decade, the Army invested heavily in augmenting and integrating LandWarNet's operational capabilities. During this same period, the enterprise and installation components, which together comprise the institutional component of LandWarNet, have remained relatively stagnant, fostering significant disparities. The emergence of new strategic imperatives, as discussed below, requires the Army to rebalance and unify the network into an end-to-end LandWarNet. Following the successful capability set approach used in the Mission Command domain, the Army will incrementally upgrade the institutional component of LandWarNet while synchronizing capabilities with the operational network. These upgrades, often transparent to end users, will provide significant capability improvements for Army leaders, network users and network operators. LandWarNet 2020 and Beyond will be more effective (e.g., single sign-on access to applications and data repositories, and robust and always available collaborative capabilities), efficient (e.g., command and control of the network through centralized Network Operations and synchronized network funding) and secure (e.g., assured identity and access management, and continuous monitoring and risk assessment of the network security posture).

Unifying Framework

The Army is at a pivotal moment – one where strategic choices made now must align the Army with Federal, DoD and Joint imperatives to achieve success for the 2020 force. To ensure operational success in the face of anticipated force structure reductions, redeployment of combat forces to CONUS, shrinking budgets and growing cyber threats, the Army must produce a unified network that fully addresses and integrates operational, institutional and business requirements and processes. The continuous evolution of information technology paradigms and technologies, particularly cloud-based capabilities, adds complexity to the situation. The network also must accommodate the need to work cohesively with joint, intergovernmental, multinational and non-governmental partners.

Many of the Army's current key imperatives are dependent upon further network modernization that produces essential qualities and characteristics. A sampling of strategic imperatives that impact network modernization, including the desired effects and the associated lines of effort are:

- Joint Information Environment Imperative – Desired Effects: (1) core data centers that are centrally managed, provide access and enable collaboration across the Joint arena and (2) normalized network and transport capabilities, which reduce redundancies, improve security and improve information exchange
- Data Center Consolidation Imperative – Desired Effects: (1) stronger overall IT security posture through consolidation of applications and services within enterprise hosting facilities and (2) IT investments shifted from locally hosted instances to more efficient computing platforms and associated technologies
- End-to-End Processes Imperative – Desired Effects: (1) data center computing environments that support consolidated IT investment and centralized hosting of business applications and (2) established architectures with accompanying governance to oversee compliance

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

- Net-Enabled Mission Command Incremental Capability Document Imperative – Desired Effects: (1) robust network transport capabilities to enable command and control on the move and Joint, Interagency and Intergovernmental and Multi-national (JIIM) interoperability and (2) robust collaboration capabilities to support exchange of operational information and training

#### Network Capability Sets

During the last decade, the Army allocated significant resources toward advancing and transforming the operational components of LandWarNet. This strategic choice, made while the Army was conducting two wars, was often to the detriment of the institutional components of the Army's network. While deployable forces and power-projection platforms benefited from high bandwidth, cutting-edge security and integrated capabilities, the institutional Army frequently relied on decades-old technology and inconsistent, unsynchronized funding for network modernization programs. The changing national security posture and objectives, such as the Army's shift to a CONUS-based fighting force, the requirement to train with the same technology and procedures as used in theater and the need for a smaller footprint in the area of operations, mandate that LandWarNet's institutional components also be transformed. To do so, while maintaining readiness, guaranteeing interoperability and minimizing cost as much as possible, the Army will employ a capability set approach for the entire network.

To realize the full operational capabilities of LandWarNet 2020 and Beyond, it is essential that Network Capability Sets (NCS) integrate operational and institutional requirements defined as Operational Capability Sets (OCS) and Institutional Capability Sets (ICS). The Army began fielding OCS in fall 2012. They are defined as the Mission Command (MC) hardware, applications, communication transport, and services that support units and organizations while deployed. Institutional Capability Sets are defined as the hardware, applications, services and communications transport that support the Army business, installation management, and Army units and organizations. The ICS supports both Generating Forces and operational units as they train, prepare to deploy and deploy. The operational units receive responsive support, while enroute and forward deployed, from capabilities resident across various Army/DoD installations.

The network enabled by the OCS connects to the ICS at the Fixed Regional Hub Nodes, which provide seamless connectivity to enterprise-level services, systems and applications – for example biometrics data and ISR feeds. The OCS hardware also reaches the ICS through Installation as a Docking Station (IADS), which allows Commanders to train with their Mission Command systems at home station. Providing home station access to coalition networks enables Commanders to gain situational understanding before deployment. As a whole, NCSs cohesively synchronize the hardware, applications and services deployed to support both warfighting and business operations and ensure that Army networks are nested with Department of Defense (DoD) standards. This enables the Army's business community to effectively manage and execute its core end-to-end business processes, with easy access to all relevant data regardless of where it is collected and stored.

In the near term, these Network Capability Sets will focus on three lines of effort (LOE): building capacity, improving security and expanding enterprise services across the Army. Supporting each of these is a cross-cutting priority: implementation of network standards. Each NCS will be composed of operational (tactical) components, prioritized according to the Army's Force Generation (ARFORGEN) cycle, and institutional components that are based on known network requirements. Under this model, the Network Mission Area will synchronize the development, integration and fielding of all network capabilities, end to end. The Army intends to field the first complete Network Capability Set (operational and institutional components) in FY15 – synchronized with the Operational Capability Sets fielding in FY13-15. The following LOE will be implemented.

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

- **Build Capacity.** The foundation for all future Institutional Capability Set upgrades, and the element on which nearly all other network modernization efforts will rely. This LOE is the backbone of the Army network and is focused on improving the Army's data processing and transmission capabilities. The Build Capacity LOE supports all of the Army's network needs, from the operational (Joint/coalition/Army) and business perspectives. Proper capacity will ensure uniform accessibility, throughput, transmission speed and reliability, no matter the location, operational theater, home station, Army and Joint training centers, and all data repositories. Initiatives and associated benefits within this LOE are:
  - o Wide Area Network (increase capacity and speed) will increase bandwidth (10Gb to 100Gb per second) at installations to enable Installation as a Docking Station capabilities, assured information exchange for Enterprise Resource Planning systems and robust access to enterprise services hosted at core data centers
  - o Transport Convergence (converge voice, video and data on a single network infrastructure – Everything Over IP) will reduce duplicative networks, increase reliability, enhance maintainability and improve security, and replace legacy copper-wire telephone switches, ISDN VTCs, and hard phones (nearing or beyond life-cycle sustainment)
- **Improve Cyber Security.** Protect and disseminate information across the network. This LOE includes expanding visibility of the network (asset visibility and device control), defending the network against attack, mitigating security breaches and defining command-and-control responsibilities for network defense.
  - o Re-engineer Top-Level Architecture (simplify and standardize the network, increase performance and enforce compliance) will simplify and reduce network complexity, flatten the base architecture and standardize network security – ultimately improving network performance and enable critical enterprise initiatives, such as Enterprise Email and Unified Capabilities
  - o Identity Management (improve access control to systems and data) will provide a Single Sign-on capability and enable controlled access to data repositories
- **Enterprise Services to the Edge.** Assure the availability of information (data, voice, video) and services to all authorized users. The Army must simplify and extend access to data, applications, collaboration tools, services and communications, for itself and all authorized JIIM partners.
  - o Enterprise Service Desk (provide users single service desk interface, and collapse network operations (NetOps) under a single common operating picture) will consolidate network support capabilities, implement a standardized level of support and reduce IT operation and maintenance requirements at the installation level
  - o Unified Capabilities (provide multiple forms of communication and collaboration through a single device) will consolidate capabilities such as chat, presence, awareness, voice and video, through a single device to enable information sharing and collaboration
- **Implement Network Standards.** Construct a single, secure, standards-based platform that reaches from every installation to the remotest operational location. Uniform, Army-wide network standards will aid integration of network solutions and serve as the foundation of the Joint Information Environment. They also will help simplify operation, maintenance and defense of the network.

Managing Institutional Capability Sets

- Technical and Architectural Maturity - Each institutional component of the network capability set will be planned, developed, resourced, procured and deployed as a block of integrated capabilities. Three primary areas must be considered in evaluating capability sets for fielding: technical maturity (the introduction or use of technology with no operational degradation or risk), architectural maturity and supportability. The intent of the capability set approach is to introduce synchronized sets of solutions with known technical maturity to minimize risk. Architectural support that allows for development, procurement, fielding and sustainment in accordance with programmed timelines and budget is critical. The system of systems design/build process respects the enormity of the task at hand in terms of scope and the complexity of modernizing vastly different scaled installations across the force.
  
- Tailoring the Institutional Component of Network Capability Sets - Operational gaps and evolving threats require changes in Mission Command systems, and modernization via routine fielding of new technologies to Brigade Combat Teams headed to operational theaters. Focused on systems engineering, integration and interoperability, architects customize materiel solutions to meet warfighter mission needs that become a critical component of Operational Capability Sets. Institutional Capability Sets must also have the same systems engineering rigor and flexibility to upgrade installations, ensuring that modernization benefits are maximized and warfighter needs are met throughout the ARFORGEN cycle. Avoiding a “one size fits all” approach, Network Capability Sets will deliver tailored packages to meet the unique needs of different installations and aligned with the fielded OCS. Potential mission enhancements to installations that support Army power projection, repair and overhaul of equipment and platforms, and training, by installation role, include:
  - o Power Projection Platforms require access to battlefield systems and software at home station and the ability to conduct live/virtual/constructive training and will receive mission enhancements that enable Installation as a Docking Station and a train –as-you-fight strategy that allows commanders and system operators to maintain skills, ensure equipment readiness and reduce the need for satellite bandwidth in garrison
  
  - o Industrial Bases must reset battlefield equipment to fully mission capable status and will receive mission enhancements that increases data exchange capacity among and with Army enterprise resource planning systems, enables logistics planning and projections for return of platforms that support Operating Force training and deployments
  
  - o Training, Education, and Labs require distance learning, live/virtual/constructive training capabilities and robust connectivity with .edu partners will receive mission enhancements that enable Soldiers to leverage schoolhouse training at home station to gain and maintain proficiency on Army systems and new technologies and enable collaboration across defense and academic research, development and testing laboratories

Integration with the POM

Institutional Capability Sets 13 and 14 are being developed now. Because this is a new concept that was not built into the FY13-17 Program Objective Memorandum (POM), there are significant unfunded requirements. The CIO/G-6 is working with Army leadership and resource managers to determine requirements, quantify gaps, develop solutions, identify the appropriate billpayers and execute with the intent of meeting prioritized fielding schedules. The rate of fielding ultimately will reflect resource availability.

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

Institutional Capability Sets 15-19 also are under development, and CIO/G-6 is coordinating to ensure that appropriate resources are identified in the POM. The other annexes to this paper provide working information regarding the lines of effort, and specify which capabilities and solutions are planned during each fiscal year.

#### Achieving Network Modernization

The end-to-end Network Capability Set approach is critical to modernizing the network efficiently and effectively, fully integrating the institutional and operational components of the Army, and aligning the Army with federal, DoD and Joint strategic initiatives. NCS success, however, is not assured and requires unity of effort and synchronization of strategies, authorities and resources. Army leaders must synchronize all network modernization strategies to follow and support NCS priorities and technical initiatives, in both the institutional and the operational environments. The Network Mission Area must be enabled with the authority to review and influence all network-related requirements and resources. Network requirements from across the Army must be coordinated and prioritized in an order that supports Army and national defense strategies; the budget and POM must be shaped to reflect NCS priorities, timelines and technical dependencies. With the backing of Army senior leaders, the Office of the Secretary of Defense and the Congress, the Network Capability Set program is the best approach for building LandWarNet 2020 and Beyond.

### **Significant Changes**

#### **Business Defense Systems**

The Army Business System IT Certification process is a structured review process that includes multiple responsible offices and culminates with the certification of funds by the Defense Business Systems Management Council (DBSMC). Section 901 of the FY2012 National Defense Authorization Act (NDAA) and the new process as defined in 10 U.S.C. 2222 affects the obligation of funds, regardless of type, for Defense Business System programs that will have a total cost in excess of \$1M over the period of the current future-years defense program. Following certification by the Army Chief Management Officer, the investments are reviewed by the Investment Review Board (IRB)/Defense Business Council (DBC) convened by the designated Defense oversight authority: Under Secretary of Defense for Acquisition, Technology, and Logistics; Under Secretary of Defense (Comptroller)/Chief Financial Officer; Under Secretary of Defense for Personnel and Readiness; and Chief Information Officer of the Department of Defense. The legislation delineates the responsibilities of the OSD Chief Management Office (CMO), Deputy CMO and the Pre-Certification Authorities (PCA). Additional DoD guidance was established with the 23 June 2011 Acquisition Policy for Defense Business Systems (DBS), which requires the use of the Business Capability Lifecycle (BCL) model as the acquisition process for DBS and assigns responsibilities and procedures for meeting these requirements. These procedures are required for the approval of all IT investments that meet the criteria defined above. The Army's portfolio management review process will focus on the overall Domain portfolio rather than limiting reviews to a single defense business system. The Army portfolio will be presented annually in an Organizational Execution Plan (OEP) which will include alignment to Functional Strategies and the Business Enterprise Architecture.

The following steps outline the high-level requirements:

1. Identification of the functional need for a business IT system and approval by an Army governance body
2. Development of the business case and architectural documents to describe the system's functional and technical requirements

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

3. Approval by the functional Domain oversight governance body
4. Securing the funding through the Planning, Programming and Budgeting Execution (PPBE) process
5. Submission of the certification documents to the Army Office of Business Transformation
6. Review for compliance with Business Enterprise Architecture, Business Process Reengineering and legal sufficiency
7. Certification by the Army PCA/Chief Management Officer (CMO)
8. Review and approval by the IRB/DBC
9. Certification by the DBSMC

**Information Assurance Activities**

The Army's Information Assurance (IA) Program is a comprehensive set of innovative policies and procedures, state-of-the-art hardware/software enabling technologies (e.g., firewalls, intrusion detection systems, proxy technologies, communications security (COMSEC)), cross domain solutions, and new training and retention initiatives designed to protect the Army's critical information infrastructure. IA program goals are to protect information, defend systems and networks, provide IA/C2 situational awareness, improve, and integrate IA transformation processes in all Army programs, and create an IA empowered workforce.

The heart of the Army's Computer Network Defense (CND) capability is the Army Cyber Command's Army Cyber Integration Operation Center (IOC) located at Fort Belvoir, VA. Integrated into the IOC are the Army's Computer Emergency Response Team (ACERT) and the Army Global Network Operations and Security Center (AGNOSC). Subordinate to the ACOIC are Regional CERTs (RCERT) co-located with Theater NOSC (TNOSC) that provide regionally based, mutually supportive capability to Army users for network outages, anomalies, identifying and reaction to cyber events. Increases in the volume, sophistication and severity of threat activity against the Army's information infrastructure require these organizations to outpace the threat in capability through increasing the investment in highly skilled personnel, training and technology. The Army will ensure that supply chain risk management is included in the program to bring mobile technology to the Army Enterprise.

The Army transitioned to the Department of Defense Information Assurance Certification and Accreditation Process (DIACAP). As part of this transition, the Army centralized the designated approving authority and testing validation process to increase both accountability and the capability to meet Federal Information Security Management Act (FISMA) requirements. In addition to expanding Army's capability to review the content of publicly accessible websites and enforce compliance with operational security (OPSEC) and other content policies, Army reviews web logs (BLOGS) for OPSEC considerations. The Army's future includes leveraging DoD enterprise initiatives to insert new technologies that will enhance both host based and network security by adopting emerging commercial products and best practices.

The Army's Cybersecurity Directorate transitioned Army products on the Army IA Approved Products List to the DoD Unified Capabilities Approved Products List (DoD UC APL). The DoD UC APL is a single consolidated list of products that have completed Interoperability (IO) and IA certification. Migration of Army products to the DoD UC APL established a precedent toward reciprocity. Use of the DoD UC APL allows DoD Components to purchase and operate UC systems over all DoD network infrastructures. Army is extensively engaged in training and certifying the IA workforce to a DoD baseline standard. Army continuously enforces training standards to increase IA professional's awareness of security issues and procedures. As part of this venture, the Army developed and implemented a means to track, monitor and report IA professional training and

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

certification status throughout all Army Commands. This transformation centralized the accountability and tracking of commercial examination vouchers for all military and civilian workforce personnel. Combined with the government contractors' certification status, Army increased their certification percentages significantly and expeditiously enforced training. The Cybersecurity Directorate implemented a comprehensive IA program in support of the Army's modular force. The Army developed and implemented management processes that improved existing operations to ensure compliance with Congressional, Federal and DoD policies and requirements. The Authority to Connect/Authority to Operate (ATC/ATO) management process has improved oversight and compliance with ATOs; close and frequent reviews improved the annual contingency, IA controls, security reviews reporting and oversight of Plans of Actions and Milestones (POA&M) IAW with the congressionally mandated FISMA. The Army continues to operate compliance inspections to ensure the application of vulnerability security patches IAW DoD mandated Information Assurance Vulnerability Alerts (IAVA). This compliance inspection team performs reviews for compliance with security guidance for wireless networks. The Army Cybersecurity Directorate developed and maintains an IA self-assessment tool for phase one of the HQDA Inspector General's IA Compliance program. The Army Cybersecurity Directorate has also established a successful Information Assurance Awareness Program. A monthly cartoon and IA article was developed that has resulted in over four million downloads to date.

The Army's Common Access Card (CAC)/Public Key Infrastructure (PKI) program is a critical component of the Army's Information Assurance (IA) Strategy. The CAC provides the card holder with a digital ID for authenticating to Army Information Systems and strengthens the Army's ability to provide Identity Management controls and a more secure form of network authentication. The CAC is the standard identification card for active duty military personnel, National Guard, Army Reserve, Army civilian employees, and eligible contractor personnel. In conjunction with PKI, the CAC allows Army users to digitally sign and encrypt email to provide a secure form of communication that offers data integrity, non-repudiation, and confidentiality of data. The CAC/PKI program is focused on PK-enabling applications, servers, and networks to process DoD public key certificates to enhance the overall security of Army networks. The Army CAC/PKI program is currently leading the Army's effort to transition from Secure Hash Algorithm (SHA) - 1 to SHA-256. This transition will help improve the Army's Network Defense posture by providing a more secure information environment that is better suited to withstand cyber threats. The Army's transition to SHA-256 will also facilitate the Army's compliance with Homeland Security Presidential Directive-12 (HSPD-12) requirements. The CAC will become DoD's Personal Identity Verification (PIV) token, which is compliant with HSPD-12. PIV tokens are signed using SHA-256 and used to enable physical access to federal buildings and controlled spaces. During FY14 the CAC/PKI program will continue to maintain Army's compliance with the Joint Task Force - Global Network Operations Accelerated PKI Implementation Phase 2 by ensuring Army private web servers containing sensitive information are enforcing CAC only authentication. Army compliance is being met through Army-wide communication efforts and policy guidance that focus on providing DoD approved alternative CAC/PKI solutions for non-CAC eligible users requiring authentication access to Army private web servers. Army Knowledge Online username and password authentication is being replaced by CAC/PKI authentication to improve network security through the use of two-factor authentication. During FY14, the Identity Management Division continued implementation of the Alternate Smart Card Logon (ASCL) token as a means for Systems Administrators to access the unclassified network with two-factor authentication. In FY14, the Identity Management Division will continue to expand the use of the ASCL token and other PKI based technology to non-CAC eligible populations of network users, minimizing the use of passwords for access to the unclassified network. In FY14 the Army Identity Management Division will continue to support the recommendations of the DoD PKI Increment Two Analysis of Alternatives (AoA), extending PKI to low-bandwidth and austere (i.e. tactical) environments by completing limited COCOM testing in South West Asia (SWA). In FY14 the Identity Management Division will complete the issuance of approximately 200,000 DoD SIPRNET PKI Tokens, extending two-factor authentication to the classified network, and implementing the DoD PKI Certificates' for Non Person Entity solution.

The Army's Cryptographic Modernization Initiative (CMI) and Key Management Infrastructure (KMI) efforts are synchronized with the Department of Defense (DoD) led efforts under the direction and guidance of the DoD CIO and executed in coordination with the National Security Agency (NSA), Services, Defense Information Systems Agency (DISA), Joint Staff and other federal agencies. The CMI focuses on two critical efforts, which are the cryptographic modernization of nuclear command, control and communications (NC3) systems and networks and the phased modernization of legacy cryptographic components, throughout the Army's LandWarNet (LWN) (Army's portion of the Global Information Grid (GIG)). The Army works collaboratively with NSA and the Services to develop and field new, technologically superior, highly assured, NSA certified cryptographic solutions, ultimately modernizing the DOD's and Army's aging inventory of cryptographic solutions.

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

To achieve compliance with DoD CIO, U.S. Strategic Command (STRATCOM) and COCOM promulgated dates for modernization of NC3 systems and networks, the Army worked with offices of DoD CIO, NSA, DISA, Joint Staff and U.S. European Command (EUCOM) to document points of convergence where the Army's LWN and the Defense Information System Networks (DISN) connect to support NC3 networks and systems. The Army's primary focus is to ensure the security of the data transported on NC3 networks by replacing legacy cryptographic devices with modern devices capable of protecting the integrity of the data well into the future. The Army is keeping pace with OSD performance targets to transition NC3 systems and networks to modern cryptographic solutions and modern algorithms.

In addition to the NC3 efforts, Army continues to move forward with its overall LWN Cryptographic Modernization (Crypto Mod) initiatives. Army has aligned its modernization efforts with the tenets of the Army's Common Operating Environment (COE), Capability Set Management Process (CSMP) and Agile acquisition efforts to ensure that the latest standards-based technologies are available for integration into the LWN. Integration of the cryptographic modernization capabilities is tied to delivery dates consistent with the Army's Force Generation (ARFORGEN) model to field the latest technologies to our deploying and resetting forces. The role of cryptographic modernization and key management within the CSMP construct is to assess the maturity (modernization) level of crypto and key management solutions for integration into the force structure to close identified capability gaps. The Army also assists its Army Commands (ACOMs), Army Service Component Commands (ASCCs) and Direct Reporting Units (DRUs) in the development of their Command five-year Crypto Mod plans. The Command plans document network topographies (current and planned) and mission changes that drive new requirements for cryptographic solutions and key management tools and services.

The Army has been fully engaged with the DoD CIO's office, the Services and the NSA Key Management Infrastructure (KMI) Program Management Office (PMO) in the development of an Electronic Key Management System (EKMS) to KMI transition plan. The Army has supported the NSA KMI PMO's performance test and evaluation events, facilitated Army KMI integration planning and continued to develop KMI operational concepts at both the enterprise and local COMSEC account levels. Army efforts and resources are focused on positioning Army to ensure its EKMS Tier 2 accounts achieve the EKMS/KMI transition baseline and training assets are put in place in preparation for KMI integration. Army has supported the KMI PMO's system developmental testing, KMI training material development, and KMI operational assessments (OA), to include Army-oriented testing with cryptographic devices as part of the KMI PMO's OA2. Army directly engaged with NSA and the other Services to ensure alignment of enterprise capabilities across the EKMS and KMI, at the EKMS Tier 0/1 enterprise levels, to include coordination of limited EKMS test infrastructure resources, planning enhancements to the EKMS Tier 1 and coordinating EKMS and KMI technical and procedural interchanges.

In FY12, as part of the KMI operational testing, the Army began its transition of select EKMS COMSEC accounts to the KMI Management Client (MGC). From FY13-17, Army will procure KMI MGCs to replace the EKMS Tier 2 (Local COMSEC Management Software [LCMS]) Workstations); procure EKMS Tier 1 enhancements and begin planning for and migration (as applicable) of EKMS Tier 1/Central Office of Record (COR) enterprise service support capabilities into KMI; and upgrade KMI components as spiral/spin technology becomes available.

The migration to KMI will be accomplished in a series of capability increments that will replace selected functionality (components of EKMS) over time. The objective cryptographic and key management solutions (due beyond 2017) will comprise a net-centric capability to facilitate COMSEC key delivery down to the end cryptographic component (ECU) level. The KMI Capability Increment (CI)-2 Spiral 1, which was introduced in FY12, will set the enterprise baseline for transition and allows Army to pilot KMI capabilities at select COMSEC accounts. From FY13-17, Army will incrementally convert Army COMSEC accounts, with focus on tactical units in FY15-16; provide automated key management capabilities to other Army entities, which currently operate outside the automated infrastructure (e.g., network controlling authorities); execute KMI capability enhancements as delivered by the KMI PMO; and enhance tactical last mile key distribution capabilities. In FY16, KMI will provide an automated interface to Army Mission Planning/Management Support Systems (MP/MSSs), supporting Army programs such as Warfighter Information Network – Tactical (WIN-T) and Blue Force Tracker (BFT), with increased key provisioning capabilities. By FY17, all Army operational COMSEC accounts and key management infrastructure roles will migrate to KMI. Army will sustain required EKMS Tier 1 capabilities until they are replaced or subsumed under KMI Capability Increment (CI)-3.

Information Assurance System of Systems Network Vulnerability Assessment (IA SoS NVA) program supports the Army's Interoperability Certification program and fielding

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

decisions by identifying and tracking vulnerabilities of material solutions that could potentially compromise the integrity, availability, and confidentiality of the networks and the data that reside on those networks. This capability is essential to identify vulnerabilities early in the acquisition process and prior to fielding Army Capability Sets (CS). Undetected vulnerabilities result in an increased risk to deployed System of Systems architectures. This initiative addresses a critical gap that exists in the Army.

In FY12 there were three IA SoS Network Vulnerability Assessment performed to reduce the threat to the Department of Defense Information Network (DODIN). IA SoS NVA overall objectives are to 1) Identify vulnerabilities through the use of penetration testing tools and techniques, that lead to compromise, unauthorized access, injection of false information, disruption, or denial of access to systems and/or information during warfighter daily operations; 2) Provide mitigation recommendations to enhance survivability of the CS architectures against penetration testing tools and techniques, which includes computer network attack (CNA) and computer network exploitation (CNE); 3) Conduct a vulnerability risk assessment to determine the operational impact of individual vulnerabilities on the CS system of systems architecture. The IA SoS NVA reports support CIO/G-6 Army Interoperability Certification determinations, G-3/5/7 LandWarNet Mission Command fielding, and ASA (ALT) material release decisions.

### **Major Accomplishments**

#### Identity Management

In FY12, the HQDA CIO/G6 Identity Management Division, a component of the Cybersecurity Directorate, achieved numerous strategic milestones. Identity Management enables the right individuals to access the right information at the right times for the right reasons, and the Identity and Access Management (IdAM) Team's efforts in FY12 laid the foundation on which this vision will become a reality for the Army and greater DoD. The team generated a Strategic Roadmap for Identity Management in the Army, which outline 7 core workstreams, which, when executed in conjunction, will systematically transforms the current IT infrastructure into a data-centric, secure, collaborative environment. In pursuit of this end state the IdAM team developed and staffed the first of a series of DoD Enterprise attribute specification. Called the Baseline Attribute Specification, this standard describes the nature, format, meaning and usage of a core set of attributes, which comprise an identity primitive. The division also contributed to the generation of the DoD CIO's memo to mandate the use of Enterprise Services for user account lifecycle management, outsourcing much of the Army's directory administration overhead, while ensuring the Baseline attribute set is disseminated universally. Another cornerstone of the Identity end state is the Authentication and Authorization Framework (AAF), the functional architecture for which was developed and evangelized in FY12. Each of these achievements provide inherent return on investment for the Army, but their real value will be revealed in FY13 and beyond, as the Army emerges as a leader in the Joint Information Enterprise endeavor.

#### DoD Enterprise Email

The Army expects to complete migration of all organizations with the exception of Army Knowledge Online (AKO), U.S. Army Corps of Engineers (USACE), and the United States Military Academy (USMA) by 31 January 2013. AKO migrations will begin on 1 February 2013 with COE and USMA later in 2013.

#### Army Data Center Consolidation

Due to a recent Department of Defense change to the definition of a data center, the scope of the data center consolidation effort increased significantly for all Services. The updated data center definition increased the Army's data center count from approximately 250 to 446, the server count from 12,659 to 16,371, and the application count from 6,374 to 13,148. In Fiscal Year 2013 the Army is updating the ADCCP cost benefit analysis and plans to address the increased inventory work load and enterprise hosting

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

facility options. In addition to rationalizing and migrating applications to DISA's Defense Enterprise Computing Centers, the updated cost benefit analysis will include Army core data centers, commercial sites and installation processing nodes, as enterprise hosting facilities.

The Army will continue to consolidate data centers and applications, provide enterprise hosting as a managed service, and improve the security of Army information assets. Through consolidation, the Army expects to reduce significantly its inventory of data centers; improve the efficiency of operations and services; improve the security of computer and information assets; and achieve centralized hosting of services while transitioning to standardized computing environments. Plans are to close 72 Data Centers, reduce 985 applications; reduce 1,872 servers; stand-up one Army core data center; and stand-up 13 installation processing nodes. During FY14, two of five planned Army Core Data Centers (ACDCs) will be established. The ACDC will operate with a standardized data center computing environment.

#### IT Asset Visibility/Continuous Monitoring

The Army will continue IT Asset Management (ITAM) development in spirals. Spiral 2 will focus on rationalizing (cleansing) the data regarding Army IT assets to make them consistent and useful. Also in Spiral 2, the Army will establish and promulgate data standards, based on ITAM data analysis, to support Information Assurance visibility and compliance. In Spiral 3, the Army will begin to utilize the data to make business decisions. The Army intends to sustain ITAM well into the future, keeping pace with the ever-evolving cyber posture.

#### Common Operating Environment (COE) Architecture

The Army continues the phased transition of existing programs of record to COE-compliant applications and systems running in common computing environments. In addition, the Army will publish in the beginning of FY 12, Guidance for 'End State' Army Enterprise Network Architecture, which will include revised technical architecture standards for the COE. Using the constructs defined by CIO/G-6, the acquisition community will establish design and test criteria, and processes for development and deployment of software solutions. The G-3/5/7 Network Synchronization Working Group also is developing a workflow model and compliance criteria for testing and certification of systems and applications.

#### Apps for the Army

In FY13, the Army will continue to collapse software-intensive systems, transport capabilities and IT infrastructure, resulting in increased standardization of computing environment deployments. With the transition of the Software Marketplace effort to ASA (ALT), the development and deployment of the Marketplace and its automated agile software business processes and practices will closely align to the evolving COE implementation.

#### Enterprise Content Management & Collaboration Services

In FY13, the Army will conduct a prototype for the Enterprise Collaboration Service. First, a Materiel Development Decision (MDD) must be made. Once the MDD is complete, the Army will conduct a prototype with 40,000 Army users to inform an Acquisition Strategy, update the Cost Benefit Analysis, and adjust resources accordingly in

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

the POM for FY16-20. The Army-wide transition is planned for FY14-15.

Throughout FY13, the Army will complete several important acquisition oversight milestones for the Content Management Service. In accordance with the NDAA 2012 acquisition process, and to synchronize acquisition timelines, these services will progress through development separately and be integrated in a future capability set, either FY15 or FY16. Both services are important elements in the transition plan for AKO's portal service.

#### Unified Capabilities (UC)

AKO instant messaging is transitioning to a Unified Capabilities service. In 2013, the Army will continue work with DISA to evaluate and establish DOD-wide shared IT service options for an integrated Unified Capabilities client to provide Voice, Video, Instant Messaging / Chat, and Presence.

#### Web 2.0 Services (milSuite)

Finally, while not part of AKO, the Army will transition its Web 2.0 suite of services, milSuite, to DISA hosting and complete the DISA Application Service Board process to determine if the capability remains a DOD-wide requirement. If so, efforts will focus on integrating these capabilities with other DOD enterprise services, such as Unified Capabilities, Enterprise Content Management and Collaboration Services.

#### Army Request for IT (ARFIT)

The Army conceived the Army Request for Information Technology (ARFIT) policy objective as a process to monitor and review the procurement of all information technology hardware, software and services, without a cost threshold and regardless of the type of procurement. The concept development was a joint effort between the Chief Information Officer/G-6 and the Chief Management Officer's Office of Business Transformation. Recent audits identified several deficiencies in Army information technology procurement policy enforcement. The Director, Office Business Transformation and the CIO/G-6 analyzed the issues from an enterprise perspective. The intent is to create a single integrated process consistent with the Clinger-Cohen Act of 1996, which requires responsibility, authority and accountability at all echelons, while giving visibility of all IT procurement at the enterprise level. The Army will continue to socialize the ARFIT plan and with the intent to implement the project in FY13.

#### Mobile Computing and Mobile Device Management (MDM) Capabilities

The Army will finalize requirements for the MDM solution, to include devices and mobile apps. The Army also is drafting a mobile strategy, which will be followed by a mobile concept of operations tied to DoD guidance and covering mobile computing from the tactical edge to garrison. In addition, the Chief Information Officer/G-6 is looking at comprehensive solution sets to help commanders manage data security risks associated with use of mobile devices.

#### Commander's Risk Reduction Dashboard (CRRD)

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

The Army will continue to develop the CCRD Full Solution, which is currently in the Business Capability Definition (BCD) Interim Solution defining preliminary documents such as the Problem Statement, Business Case, and Rough Order of Magnitude Estimate. The Full Solution Problem Statement will be submitted to the Defense Business Management Council (DBMC) and once approved delegated to the Army Component Executive at the Assistant Secretary of the Army for Acquisition, Logistics, and Technology (ASA (ALT)). Additionally, updates will be made to the pre-MDD and MS A documentation in light of the CRRD interim solution. Ongoing development and employment of the interim solution will continue as appropriate with a target completion date of 20 February 2013 when 14 of the 24 risk factors will be accessible to commanders.

#### Transition of Army Knowledge Online (AKO)

In 2013 AKO will have migrated over 500,000 webmail users to DoD Enterprise Email (EE). The migration that started in late January, with the bulk of the users being migrated in February and March, will continue through June. Throughout 2013, the Army CIO/G6, in coordination with the HQDA Staff, will continue to engage for review and support of the AKO Transition package, review all business processes that are dependent on AKO or AKO email, and assist with communicating this change to our Army community. The Army will continue the AKO transition and elimination of partial AKO capabilities, which will include: 1) the transfer of Single Sign-on capability to ALTESS beginning in 2QFY13, and 2) transition of Non-CAC holders to DSLogon authentication from DMDC (used today by TRICARE and Veteran's Affairs).

PEO EIS will continue to finalize a comprehensive transition plan for AKO Services and implement supporting communication plans. The CIO/G6, with support from the HQDA Staff and PEO EIS, will develop an EXORD to be published by the DCS, G3/5/7 NLT 1 Apr 13. This EXORD will delineate transition dates for all AKO services and accounts and provide communications for affected personnel. AKO Portal and. The CIO/G6, in conjunction with the HQDA Staff and PEO EIS will develop the AKO resourcing drawdown plan for POM 15-19. Additionally, if the Secretary of the Army signs the Family Member and Retirees Memorandum, the Army will be removing them from AKO during 2013; however, this approval is pending. These actions support original Army notification to Congress in the Business Transformation Plan, 1 Oct 10.

#### The Federal Information Security Management Act (FISMA) Compliance

FISMA is a federal law that requires all government agencies to ensure and document the information security of their Information Technology (IT) systems. In FY12, the Army maintained an accreditation rate of 89% while maintaining the number of systems requiring Security Accreditation at 1725 systems. This included Authorizations to Operate (ATOs) and Interim Authorizations to Operate (IATOs). In other key reporting metrics, the number of Army systems that tested their Security Controls in FY12 was 88%, similarly the number of systems testing their Contingency Plans had a score of 89% and finally the Annual Security Reviews were 88%. These statistics were reported in the annual DoD FISMA report to the Office of Management and Budget (OMB) and to Congress. In FY12 the Army continued a process to provide advance notification to owners of systems and circuits when their "Authorization to Operate or Connect" will expire. The process includes e-mails from the Army Certification and Accreditation Tracking Database (C&A TdB) 210 days (7 Months) before the expiration of an accreditation. This notification is generated automatically, by the C&A TdB, for the System Owners to provide adequate time to complete the processes and improve the over-all security posture for the ARMY. Circuits that require an Authority to Connect (ATC) are accredited as the associated system is accredited.

### **Major Planned Activities**

Identity Management

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

By the end of FY13, the Army CIO/G6 will acquire critical momentum in the establishment of Identity Management as an institution and a core capability, and the IdAM team intends to capitalize on that groundwork in FY14. The first goal is to initiate the implementation of a DISA Enterprise Directory Services (EDS) –based provisioning Service to fulfill the intent of the DoD EDS Memo. This service will automate the creation, update, and removal of accounts in Army’s directories, streamlining traditionally manual process and decreasing onboarding and transitional downtime. In parallel, the CIO/G6 IdAM Team will sponsor the development of an IT Entitlements Portal – hosted by DMDC and based upon the milConnect Portal model – which will help DoD Components to develop a centralized Authoritative Attribute Source for identity data. Further, the Army CIO/G6 will start to decompose the AAF architecture, developing representative use cases for mobile device and Non-Person Entity(NPE) use, and the escalation of authorization capabilities above the Application-level, towards a central service. To support all of these capabilities by ensuring that their development is in accordance with best business and security practices, the IdAM Team will craft policy which outlines the criteria for identity

#### DoD Enterprise Email

The Army’s transition to DoD Enterprise Email (EE) is not about email– it is about providing network access anywhere, anytime through a single identity and posturing the Army or move to a Joint Information Environment. The Army began migrating 1.4 million NIPR mailboxes from Army-owned legacy Microsoft Exchange systems to the DISA email service in February 2011. In 1QFY12, National Defense Authorization Act 2012 put EE migration on hold; by 2QFY12 the Army completed the required Acquisition Decision Memorandum, reported to Congress, and resumed migrations in 3QFY12. As of 9 January 2013, the Army had migrated 663K Army and Joint users in CONUS, Pacific Command and U.S. Army Europe (75% of initial goal and 45% of final goal). The Army expects to complete migration of all organizations with the exception of Army Knowledge Online (AKO), U.S. Army Corps of Engineers (USACE), and the United States Military Academy (USMA) by 31 January 2-13. AKO migrations will begin on 1 February 2013 with COE and USMA later in 2013.

The Army not only achieved the establishment of a single identity for an individual’s entire DoD career; we established the foundation for improving security and achieved efficiencies as well. The many results the Army attained by migrating to EE include: a single identity for the entire DoD career; enforced two-factor, PKI-based logon using common authentication credentials (reducing vulnerability inherent in using passwords; reduced attack potential – over 500 mail servers and infrastructure retired and enclave variations eliminated; a cost savings of \$75M/year; true cost transparency; a collection of standardized technology and business processes that reaches up, down and across the enterprise; and consolidated incident reporting, coordinated problem resolution and established configuration management. These results contribute to a more effective and secure capability, greater stewardship of resources, and true global accessibility.

#### Army Data Center Consolidation

The Army Data Center Consolidation Plan (ADCCP) is the Army response to the Office of Management and Budget’s Federal Data Center Consolidation Initiative, which directs all Federal departments and agencies to develop a plan to consolidate their data centers. The ADCCP establishes standards and assigns responsibility for the rationalization and migration of applications software and consolidation of data centers. The Army’s initial goal is to close 185 of its data centers by the end of FY15, with further reductions thereafter.

The long-term goal is to decrease the Army's IT infrastructure and application inventory to garner sizeable efficiencies, reduce exposure to cyber exploitation and streamline IT life cycle management. Army data center consolidation provides improved performance, increased information security, and fiscal/operational efficiencies, such as reduced

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

energy usage. This is accomplished by migrating applications into a discrete number of operating environments and consolidating a number of geographically dispersed data centers and servers into five Army Core Data Centers and installation processing nodes. This action will provide enterprise hosting environments as a managed service. This plan is aligned with and supports transition to Department of Defense, Joint Information Environment future state.

As of December 2012, the Army has closed 47 non-Base Realignment and Closure data centers resulting in approximately 650 server efficiencies, 765 application efficiencies, 24 personnel efficiencies and \$24M in cost efficiencies. The data center closures also include approximately 32,000 square feet of floor space efficiencies resulting in estimated energy cost efficiencies of \$342,000.

#### IT Asset Visibility/Continuous Monitoring

IT Asset Management (ITAM) comprises a strategy, process, and repository to provide visibility of IT assets across the Army's Network, LandWarNet. ITAM leverages standard network operations (NetOps) capabilities to automatically capture data regarding systems and applications on the Network, down to individual printers and workstations. With this information, the Army is able to track whom and what is accessing the Network. Definitive knowledge of assets in use and on the Network helps the Army better use limited resources to develop sound IT budgets, plan for future operations, and implement unified enterprise architecture. Knowing whom and what is accessing the Network also improves the Army's security posture.

The Army established a program office, within Network Enterprise Technology Command (NETCOM), to manage the design, development, implementation and sustainment of ITAM. Army Cyber Command, the Chief Information Officer/G-6 and NETCOM are working with organizations across the Army to identify, validate and prioritize ITAM operational requirements. In 1QFY12, the Army achieved ITAM initial operating capability and began Spiral 1 development, which captured and identified IT assets operating on the Network.

#### Common Operating Environment (COE) Architecture

The COE is an approved set of computing technologies and standards that enables secure and interoperable applications to be developed and executed rapidly across a variety of computing environments (CEs). The major objectives of the COE are to:

- Deliver capabilities to the Soldier faster.
- Reduce the life cycle cost of developing and sustaining IT systems.
- Promote a standards-based open architecture that leverages industry best practices.
- Improve interoperability across computing environments and applications while maintaining information assurance.

Since the publishing of the initial Common Operation Environment Architecture in October 2010, the ASA (ALT) released the COE Implementation Plan in November 2011 and the CIO/G-6 published Army technical architecture guidance and standards in Appendix A to the COE Architecture in 2012 as well as subsequent appendices to the COE Architecture to address. The COE Implementation Plan defines how and when specified programs of record will migrate from delivering systems (computing devices with installed software applications) to the COE system of systems approach that enables the delivery of software applications separate from hardware devices. The Army reviews this unified architecture semi-annually to ensure alignment of existing capabilities and viable new technologies, systems, and applications. New IT acquisitions and development must conform to the COE and the Army continues to develop plans to bring existing systems and applications into compliance, as well as identify those that are candidates for

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

elimination.

#### Apps for the Army

Apps for the Army (A4A) drastically reduces the time it takes to deliver applications to the Soldier by integrating three strategic Enterprise initiatives: the Common Operating Environment's (COE) deployment of standardized computing environments, the establishment of agile end-to-end software business processes, and the implementation of an Army Software Marketplace. These efforts combined enable the Army to move from lengthy system-of-system approaches to industry proven practices that accelerate the development of COE compliant applications, delivering frequent increments of mission relevant capabilities. This supports Army-wide effort to make the organizational, policy, process and cultural changes necessary to keep pace with innovation, including the rapid integration of new commercial technologies.

In FY12, the Army CIO/G-6, in coordination with the Assistant Secretary of the Army for Acquisition, Logistics and Technology (ASA (ALT)), launched an Army Software Marketplace prototype to automate, exercise and validate the baseline agile processes developed in collaboration with key Army partners and stakeholder communities, such end-users, developers, legal, finance, contracting and Network operators. This work supported identifying high level Marketplace requirements as part of the COE implementation and transitioning the Marketplace effort to ASA (ALT) and a Program Executive Office for implementation.

#### Enterprise Content Management & Collaboration Services

Like Enterprise Email (EE), the Army is transitioning to other DoD-wide shared IT services such as: DOD Enterprise Content Management and Collaboration Services, Unified Capabilities, and Web 2.0 Services (Unified Capabilities and Web 2.0 Services are addressed separately). Upon the approval of the National Defense Authorization Act 2012 (1QFY12) response for EE, the Army is applying this approved acquisition model to all DoD-wide shared IT services. As a result, the Enterprise Content Management & Collaboration Service effort was adjusted in accordance with the new approach. In 2QFY12, The Enterprise Content Management & Collaboration Service effort adjusted its processes accordingly and the Cost Benefit Analysis was revalidated. In 3QFY12, the Army Information Management Requirements were validated by the Business Systems IT (BSIT) board, following the same process as EE per the NDAA 2012.

#### Unified Capabilities (UC)

Previously, the Army approached Unified Capabilities (UC) with a broad scope that included the majority of standard IT services, including email, collaboration, content management, business process management, and Web 2.0 services, among others. In FY12, the Army adjusted its use of the term to be more consistent with the scope DoD used, focusing UC on voice, video, instant messaging / chat, and presence; removing email, content management, and collaboration as separate IT services. Using this new scope, the Army conducted a cost-benefit analysis for an integrated UC service at all Army installations to include required infrastructure upgrades. The Army also completed acquisition of its first set of enterprise-capable Voice over IP switches that will support integration with DISA's UC services.

#### Web 2.0 Services (milSuite)

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

The Army's set of Web 2.0 services, milSuite, is a capability the Army provides to the entire DoD. In FY12, milSuite established the FORSCOM Virtual Training Site (Weapons System information and videos for training) and a Tactics, Techniques, and Procedures (TTP) development wiki for TRADOC's Combined Arms Doctrine Directorate (CADD). Two planned capabilities were fielded, the Events tool in milBook and the Eureka Idea Space. The milSuite team also completed several technical goals; including implementing CAC-only authentication for cybersecurity and adjusting user names to match the DOD Enterprise model in preparation for future integration efforts.

#### Mobile Computing and Mobile Device Management (MDM) Capabilities

The Army is addressing devices, mobile applications (apps), infrastructure, and management oversight to provide mobile computing in an efficient, economical, secure and defensible manner. The Army's mobile computing approach will include both government furnished equipment (GFE) and personally owned devices (Bring Your Own Device or BYOD). The Army is teaming with the other Services, Defense Information Systems Agency (DISA), and National Security Agency (NSA) to pursue broader GFE capability. GFE will allow visibility of mobile devices and services, implementation of data and device security, and streamlined updates for services and apps. The BYOD solution will leverage virtualization to allow secure network access. For BYOD, the Army has teamed with DISA to engage industry in producing Common Access Card (CAC) enabled mobile virtualization apps. This will enable personally owned mobile devices to access the Network, much as privately owned home computers can. BYOD will extend mobile computing capability beyond that provided by GFE.

In September 2012, the Army began participation in DoD Mobility Pilot, a three phased initiative over the next two years. The Army was provided a mix of 200 "no cost" mobile devices and training provided by DISA. This pilot is a first step in the implementation of DoD's Mobile Device Strategy, as the Department postures to set up a central mobile device management service at the DoD enterprise level to ensure the security of mobile hardware. Objectives of the pilot include:

- Development of a mobile application development framework and certification process that will support low-cost, faster development and delivery of simple but useful function to the warfighter and/or support personnel;
- Establishment of a Mobile Apps Store and development process
- Explore alternatives to the Common Access Card (CAC) sleds, a cumbersome and outdated capability that inhibits users from using
- Improve data usage and availability to mobile devices
- Institutionalize a Mobile Device Management Request for Proposal (RFP) Process
- Utilize a wireless detection capability that is integrated with Mobile Device Management (MDM)

The Army CIO/G6, Cyber Security Directorate began development of the Army's Mobile Device Strategy to align with the DoD strategy and is continuing the development and maturation of the security policies and standards for Army use of mobile devices.

#### Army Request for IT (ARFIT)

The Army Request for IT (ARFIT) establishes Army policy and processes for procuring all information technology hardware, software, and services, without a cost threshold and regardless of the type of appropriation. A joint effort between the Chief Information Officer/G-6 and the Chief Management Officer's Office of Business Transformation, ARFIT creates a single integrated process consistent with the Clinger-Cohen Act of 1996. It establishes responsibility, authority, and accountability at all echelons, while providing visibility of all IT procurement at the enterprise level. ARFIT will provide Army leadership with situational awareness of IT investments across the entire force. This visibility will aid in identifying and assessing inefficiencies in fielding IT capabilities and assist in developing and sustaining budget resource decisions. The ARFIT process will

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

drive down IT costs by enforcing commercial off-the-shelf (COTS) IT procurement through the Computer Hardware, Enterprise Software and Solutions (CHESS) Program. Additionally, ARFIT will enhance security by preventing uncertified IT procurement and installation on the Network.

In FY 12, the ARFIT team worked with the Army gatekeepers to define, develop, and validate roles, responsibilities, and business procedures. The Army published the formal ARFIT process and implementation plan in ?(month) 2012. In November 2012, the Army CIO/G-6 submitted a revised Army Regulation (AR) 25-1 with updated procurement and enforcement policy for approval and publication. As needed, the Army will include further updates to AR 25-1 every 13 months.

#### Enterprise Licensing Agreements (ELAs)

In December 2012, the Army led an effort to obtain the first Joint ELA, leveraging the buying power of 2M+ Army, AF, and DISA users to secure best DoD value, resulting in cost avoidance opportunities of approximately \$70M per year. This ELA achieved strategic sourcing efficiencies by partnering with AF and DISA and covers all Army, AF and DISA including COCOMs and Joint elements where Army or AF is the Executive Agent. Other ELAs the Army obtained in FY12 included consolidation of over seven thousand separate contracts into a single Army agreement with a projected cost avoidance of approximately \$150M over five years and an agreement that increased network security by upgrading a company's software across the Army, producing a cost reduction of 88%.

#### Integrated Disability Evaluation System (IDES)

Physical Evaluation Board (PEB) members and Physical Evaluation Board Liaison Officers (PEBLOs) lack a reliable and effective integrated tool suite to execute the IDES process mission with the Department of Veterans Affairs. In September 2012, the CIO/G-6 initiated a Tiger Team with Army Publishing Directorate (APD), G-1 –Physical Disability Agency), OTSG/MEDCOM CIO & Patient Administration, Army Knowledge Online, and NETCOM to investigate errors and to propose technical and procedural recommendations. The team investigation, in support of the VCSA's Health of the Force Initiative validated sporadic access and latency errors reported since Fall 2010. The investigation identified multiple agencies and multiple application tools supporting the current IDES process resulting data sharing issues, duplication of data in the case of ePEB, and discovered that some systems were not fully implemented as designed. Other findings included: IDES lacked a single program manager or systems integrator across the suite of tools, the lack of an effective integrated tool to work with Veterans Affairs systems, and the lack of standardized tracking, reporting, search, and query solutions across the many systems.

In September 2012, The Army's Tiger Team began a root cause analysis and completed the Root Cause Analysis Test Plan on 19 November, documenting analysis and resolution test results. Follow on activities to be conducted in 2013 include completion of the IDES Full Process Gap Analysis and development of the IDES To Be Architecture by the end of April 2013.

#### Commander's Risk Reduction Dashboard (CRRD)

The requirement for a risk reduction dashboard was recognized by the Army Health Promotion Risk Reduction Suicide Prevention Report 2010 (Red Book). This requirement was turned into Task M-021 by the Health Promotion Risk Reduction Task Force and HQDA G-1 was assigned as the Office of Primary Responsibility. HQDA G-1 engaged the Communications-Electronics Command (CECOM) to develop functional requirements for the dashboard. CECOM completed the requirements development and prepared

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

documentation in anticipation of the acquisition process. The full CRRD solution – through the acquisition process – is lengthy. Therefore, an interim solution is being developed. The interim solution is collaboration between HQDA G-1, CECOM, and CIO/G-6. The CIO/G-6 provided technical oversight in support of the effort and assisted the team in identifying 24 desired Data Risk Factors by polling 1100 (+) Commanders. The interim solution will provide commanders the visibility to 14 of the 24 Risk Factors and enable commanders to identify: Soldiers with known high risk behavior and the risk level of newly-arrived Soldiers. The interim solution includes dashboard development, establishment of the data policy with legal review, and acquisition. The interim solution is classified as a Proof of Concept that precedes a formal Analysis of Alternatives and is not a stand-alone program, but rather an effort leveraging an existing system, the Person-Data Environment (PDE) at the Army Analytics Groups (AAG). The CRRD Full Solution is a new Defense Business System that must follow the formal acquisition process

Throughout FY12, the Army evaluated four Courses of Action (CoA), selected AAG as the data environment for the CRRD interim solution, and drafted a milestone schedule for executing the CRRD interim solution. Additionally, the team mapped the 14 risk factors identified for the CRRD interim solution to the appropriate authoritative data source, completed the preliminary review and update of the System of Records Notice, established the environment for the interim solution with remote access for the development team, developed the web interface to provide a proof of concept, and created mock-ups to demonstrate the conceptual end user interface. In November 2012, the interim solution capability was demonstrated to the DCS, G1 and the Vice Chief of Staff of the Army. The team also focused on the CCRD Full Solution documentation of the preliminary business and technical needs, various leadership briefings, and preparation of the documentation necessary for the funding certification and Materiel Development Decision (MDD)/Milestone A decision of the Business Capability Lifecycle (BCL).

#### Transition of Army Knowledge Online (AKO)

To fully achieve the substantial financial economies and efficiencies and security improvements promised by migration to DoD-wide shared IT services such as Enterprise Email (EE), the Army must finalize transition of all business processes off of Army Knowledge Online. The Army is improving capabilities and driving cost efficiencies through the elimination of redundant email accounts and storage; a major outcome that drove the Army EE cost benefit analysis. To eliminate the dual storage of user email in both, AKO and DoD EE, the Army has directed AKO to delete all mail stored in the AKO accounts of users, who have migrated to EE. The AKO address will remain valid and forwarded to the EE system and the user will manage all messages from a single Enterprise Email inbox. Only the associated AKO email storage, mail handling capability, and mail interface will be eliminated. The storage for the closed accounts will be repurposed to lifecycle storage for the AKO portal. This transition is operationally effective, improves security, enforces two-factor authentication, and reduces redundancy. This action will not affect: Deployed Soldiers, Family Members, Retirees, Sponsored accounts, Army Reserve Soldiers, and Army National Guard Soldiers. DoD Enterprise Email is the right thing to do for our Army.

On 1 November 2012, AKO began changing the AKO email accounts of users who migrated to EE at a rate of several thousand each day. AKO completed approximately 360K accounts in 2012 and will continue the process in 2013 until all users on EE will have their AKO mail storage removed. AKO set each migrated user's account to automatically forward to their EE. The Army also decommissioned AKO Forward in September 2012 with a cost avoidance of \$3.4M.

#### The Federal Information Security Management Act (FISMA) Compliance

Throughout 2013, the Office of Management and Budget (OMB), the Department of Defense, and the Army will coordinate to improve the metrics used to measure the security of Information Technology systems. New processes will be used by the Army to assist the responsible system owners' with the accreditation process and help ensure a timely

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

completion to the certification and accreditation steps. A forecast is provided to all commands with respect to systems expected to have compliance expirations, seven (7) months in advance, to show the commands the level of effort and the expected resources needed to accomplish a successful accreditation evolution. This effort is to improve the ARMY FISMA compliance, as mandated by OMB, to 95% (effective 01OCT12). Every effort will be provided to allow sufficient time for the system owners to properly register systems in the Army Portfolio Management Solution (APMS) Tool and secure the appropriate third party Accredited Certification Agents (ACA) to ensure a timely completion. All efforts are focused on making the “Army Compliant and Cyber Ready”. The Army will continue to mitigate issues that have proven to be a concern to the compliance efforts, namely to continue early and frequent notification to Army systems with expiring accreditations of ATOs/IATOs, and to provide more emphasis on personnel training

**IT Enterprise Strategy & Roadmap (ITESR) Implementation Activities**

**Consolidate Security Infrastructure (NS1)**

The Army will incorporate COMSEC and Key Management technology into the Network Integration Evaluation (NIE) in support of the Army’s Agile Process. The Agile Process focus is to rapidly procure critical capabilities while ensuring the technology is mature for integration and synchronization. NIE is a new combined test and evaluation process that demonstrates the Army’s holistic focus to integrate network components simultaneously in one operational venue.

**Implement Cross-Domain Solution as an Enterprise Service (NS3)**

Since 2003, the Army Cross Domain Management Office (CDMO) in Army CIO/G6 Cybersecurity Directorate has coordinated DoD approvals to implement Army requirements for Cross Domain Solutions. A Cross Domain Solution is an “Information assurance solution that provides the ability to access or transfer information between two or more security domains.” For example, Position Location Information (PLI) of air and ground vehicles are tracked in both the Unclassified (NIPRNet) and Secret (SIPRNet) security domains. Cross Domain Solutions are employed to ensure that a full picture of friendly forces is available on both security domains, which extends command and control and reduces the risk of fratricide.

As the Army and DoD continue to transform and modernize, more net-centric systems are deployed to the tactical edge, increasing the demand for Cross Domain Solutions in the tactical area. Numerous tactical Cross Domain Solutions are currently in development to support the following programs: Force XXI Battle Command Brigade and Below (FBCB2), Nett Warrior, Bradley Infantry Fighting Vehicle, Abrams Tank, and Warfighter Information Network – Tactical are major examples of programs that will be dependent on Cross Domain Solutions. The Army CDMO provides subject matter expertise to each of these programs to enable their system certification, accreditation and ultimate DoD approval to connect to multiple security domains.

The Army CDMO provides thorough documentation review, analysis and limited risk rating for planned implementations of Cross Domain Solutions, facilitates requirement owners through a highly specialized connection approval process, coordinates with NSA, DISA and the Unified Cross Domain Management Office (UCDMO), advocates for Army requirements at the Cross Domain Technical Advisory Board (CDTAB) and Defense/IA Security Accreditation Working Group (DSAWG) and other boards that are convened as required to obtain risk rating and connection approval.

The Army CDMO, to address requirements levied by the Unified Cross Domain Management Office, organized an Army Cross Domain Working Group, chaired by the Army CDMO and co-led by representatives from the Army Deputy Chief of Staff for Intelligence (DCS G-2), the Army Deputy Chief of Staff for Operations and Plans (DCS G-3/5/7) and the Assistant Secretary of the Army for Acquisition Logistics and Technology (ASA(ALT)). The Army Cross Domain Working Group will enable the Army CDMO to address the governance of Cross Domain Solutions in the Army that have not been managed previously, to include the development of an Army Cross Domain

**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

Roadmap and the development of an Army Cross Domain Service Catalog. As a result, the Army CDMO is expending more effort on coordinated strategic management of Army Cross Domain requirements, capabilities acquisition, architecture development and service delivery. This effort will continue for the foreseeable future as Cross Domain Solutions become a major technology enabler across the warfighting, networking and business domains.

**Joint Information Environment (JIE)/Joint Enterprise Network (JEN) (NS8)**

The JIE is a secure environment, composed of shared information technology (IT) infrastructure, enterprise services, and single security architecture to achieve full spectrum superiority, improve mission effectiveness, increase security and realize IT efficiencies. JIE supports the objectives of the Global Information Grid (GIG) 2.0. The LandWarNet is the Army contribution to the JIE. The established and emergent CIO/G-6 plans, and the execution of Initiatives are in synch with the vision for JIE. Investments in LandWarNet (LWN) are supportive of GIG 2.0 and LWN ICD requirements. Per the LWN ICD the LWN is defined as "The Army's enterprise network, a single, secure, standards-based, versatile infrastructure linked by networked, redundant transport systems, sensors, warfighting and business applications, and data to provide our Soldiers and civilians the information they need, when they need it, in any environment, to enable decisive actions with unified action partners" across all security classifications/domains. Actions to execute LWN are intended to leverage existing programs, emergent capabilities and resources into a single integrated network for operating and generating forces to provide a joint information environment that enables seamless information sharing and increased speed of action.

**Data Center and Server Consolidation (CS1)**

The Army Data Center Consolidation Program (ADCCP) implements Presidential, Federal Chief Information Officer, Office of Management and Budget, Department of Defense, and Army executive directives to consolidate data centers. The long-term goal is to decrease the Army's information technology infrastructure and application inventory to garner sizeable efficiencies, reduce exposure to cyber exploitation and streamline information operations. The ADCCP provides improved performance, increased information security, and fiscal/operational efficiencies by migrating applications into a discrete number of operating environments (OEs) and consolidating a number of geographically dispersed data centers and servers into five Army Core Data Centers (ACORs), which provide enterprise hosting environments as a managed service. This plan is aligned with and supports transition to DoD's Joint Information Environment (JIE) future state. The Army will eliminate 185 data centers by the end of Fiscal Year 2015, with follow on closures planned. The Army's plan focuses on closing data centers and consolidating to ACORs, and as appropriate, commercial or joint data centers.

In FY12, the Army closed 39 data centers and conducted data center discovery across 9 installations. Additionally, a plan was developed to transition to 5 Army Core Data Centers (ALTESS, Radford, VA; Pentagon Data Center (ITA); Fort Bragg, NC; Fort Knox, KY; and Redstone Arsenal, AL) and establish a single installation processing node (IPN) per post/camp/station (p/c/s) in CONUS. In May 2012, the Army CIO/G-6 drafted a memorandum titled, "Guidelines for Consolidation of Small Data Center Facilities" for the Vice Chief of Staff of the Army approval and publication on 29 Sep 2012. The memorandum directs any identified location with two or fewer servers to be designated for closure, unless they migrate to a data center or DISA Defense Enterprise Computing Center (DECC). Army commands and organizations are working to comply with the directive. Also, in FY12, the Army accomplished the following: ADCCP program management transition to Program Executive Office (PEO EIS), implementation of the revised OMB data center definition, Fragmentary Order #2 staffing, and categorization and typing of data centers in the tracking tool by facility purpose.

In FY13, the Army plans to close 66 data centers, implement the establishment to one ACOR (ALTESS, Radford, VA), conduct installation data center discovery at 20 posts/camps/stations (p/c/s) to facilitate the identification of a single IPN, and to migrate applications into a discrete number of operating environments (OEs) at the ACOR.

**Enterprise Messaging and Collaboration (including email) (ADS1)**

To meet the Army's wide-ranging needs, the Network must be unified, secure, versatile and reliable. To get there, the Army is pursuing multiple enterprise-level initiatives. The most important to the basic network infrastructure is the Common Operating Environment (COE). The COE is an approved set of computing technologies and standards to which the Network itself and all applications and systems riding the Network must adhere. Under the COE, the Army has delineated common computing environments according to hardware type and the bandwidth required. To tie it all together, the Army has standardized to a single mode of information transmission. Regardless of format or means of delivery, the Army will use the nonproprietary, commercially based Everything over Internet Protocol (EoIP) to transmit data, voice, video and signals.

The COE-EoIP combination will enable quicker development and fielding of secure, interoperable applications and systems that satisfy today's – not yesterday's -- operational requirements. Industry will know upfront the technical standards to which it must build solutions, cutting the time necessary to respond to Army needs and guaranteeing that new systems will work with each other and those already in the field. Alignment with commercial norms will allow the Army to use more commercial-off-the-shelf or near-COTS technology, which will help reduce cost. Additionally, the COE will simplify configuration and support, streamline and facilitate training, and improve the Network's defense posture.

On top of the COE, the Army is applying an enterprise approach to many mission-essential services and functions. To date, the Army's move to Enterprise Email remains one of its most far-reaching consolidation efforts. Through a partnership with the Defense Information Systems Agency (DISA), the Army will leverage DISA's Microsoft 2010 cloud and nine Defense Enterprise Computing Centers to provision email for 1.4 million unclassified users and 200,000 secret network users across the Army, Transportation Command, European Command and Africa Command. Enterprise Email improves security by eliminating unnecessary seams between heterogeneous local networks. Ultimately, it also will lower costs approximately 60 percent by eliminating redundant hardware, storage and personnel expenses. As of November 2011, more than 180,000 Army users had been transferred to the DISA cloud, and the project remains on target for completion by March 2012.

The identity discovery and standardization inherent in Enterprise Email implementation are paving the path for another important reform: moving directory services and authentication to the enterprise level. Currently, the Army uses multiple "forests" (Microsoft Active Directory network environments) to authenticate users to the Network. Doing so complicates security and disrupts user access whenever personnel change locations. Enterprise-level directory services and authentication address these problems by integrating the disparate forests into a global architecture.

The Army also is pursuing a standardized, cloud-based set of collaboration capabilities. Army Enterprise Collaboration Services (ECS) will improve knowledge management and promote IT efficiency through the delivery of collaboration capabilities as a managed service. By using existing licenses to provide access to centrally managed versions of Microsoft SharePoint® and IBM FileNet®, the Army will enable team collaboration, content management, records management and business process management among all Army users, regardless of location. Importantly, these enterprise services will integrate with the systems used by Army units during training and deployment. While the Army will retain oversight of ECS, its day-to-day management will rest with DISA, the service provider.

**Identity and Access Management (idAM) Services (ADS2)**

The Army's CIO/G6 Cyber Directorate, Identity Management Division has also undertaken development of an Identity Management capability. Identity Management is a system of procedures, policies, and technologies to manage the end-to-end lifecycle of electronic credentials. Common capabilities found in Identity Management systems include Directory Services, Access Management and Identity Lifecycle Management. Directory Services are a means for finding others on the network. Access Management controls access to network resources. Identity Lifecycle Management provides account creation and deletion management, access privileges and secures personal identity information.

**Department of Defense**  
**Fiscal Year (FY) 2014 IT President's Budget Request**  
**Department of the Army Overview**

---

Identity Management enables the right individuals to access the right information at the right times for the right reasons. This capability addresses the mission-critical need to ensure appropriate access to enterprise resources to meet increasingly rigorous federal regulatory requirements. In FY11, the Army Chief Information Officer/G-6 Cyber Directorate, Identity Management Division established an Integrated Project Team (IPT). This team is composed of highly skilled military and civilian identity management specialists. To date, the IPT has helped define network identity and access requirements, it has identified and established collaborative partnerships with other DoD and non-governmental organization identity management specialists, and it has developed processes and best business practices for the end-to-end life cycle management of network identity and access controls. The IPT provided the Defense Information Systems Agency (DISA) with a set of requirement specifications for developing an Enterprise Identity Services (EIDS) capability. This capability, part of DISA's Identity Synchronization Service (IdSS), uses identity attributes collected and stored by the Defense Management Data Center (DMDC) to enable a true enterprise single sign-on capability providing greater security, and faster network resource access to the Soldier.

**Consolidate Software Purchasing (BP1)**

Army Federal Acquisition Regulation Supplement (AFARS) Part 5139 mandates the Computer Hardware Enterprise Software and Solutions (CHES) as the Army source for commercial Information Technology (IT) purchases and Army Regulation (AR) 25-1, and Department of the Army Pamphlet 25-1-1 designate CHES as the Army's primary source for commercial Information Technology (IT) purchases including Software. CHES contracts and future contracts are an integral element of the DoD goals as well as key the strategic IT portfolio of investments established by Senior Leadership to ensure cost savings, standardization and security across the spectrum. CHES contracts (and future contracts) not only optimize price discounts but allow other services to capitalize on the savings and benefits as well. CHES is the Army's Software Product Manager (SPM) with extensive and unparalleled expertise in the very complex and contentious arenas of licensing, terms and conditions, End User License Agreement (EULA), pitfalls and other areas. Not only does CHES vigorously educate the community but CHES also plans, administers and partners with the DOD ESI on over 30 different agreements, including Microsoft, Oracle, SAP and a host of others that are open to all Federal Agencies. Due to CHES efforts, Army and other agencies are able to realize millions of dollars each year in reduced licensing costs as well as more beneficial terms and conditions (e.g. greater transferability, expanded use rights, perpetual licenses, fixed rate maintenance, etc.). CHES ensures utilization of DoD inventory, establishes Enterprise Software Agreement (ESA), adjust terms and conditions within the scope of ESAs, analyzes and issues waivers, if appropriate, from ESI requirements IAW AR 25-1 and DA IT Purchasing Guide (Sep 06) and manages Working Capital Funds for borrowing. CHES strategically plans for future and emerging requirements and executes aligning with and supporting all tenets of Better Buying Initiatives across the DOD spectrum.

**Consolidate Hardware Purchasing (BP2)**

Army Federal Acquisition Regulation Supplement (AFARS) Part 5139 mandates the Computer Hardware Enterprise Software and Solutions (CHES) as the Army source for commercial Information Technology (IT) purchases and Army Regulation (AR) 25-1, and Department of the Army Pamphlet 25-1-1 designate CHES as the Army's primary source for commercial Information Technology (IT) purchases. CHES contracts and future contracts are an integral element of the DoD goals as well as key the strategic IT portfolio of investments established by Senior Leadership to ensure cost savings, standardization and security across the spectrum. CHES contracts (and future contracts) not only optimize price discounts but allow other services to capitalize on the savings and benefits as well. For instance, CHES is responsible for the Army Consolidated Buy (CB) referenced in BP-2. Through the CB process a variety of Notebooks and Desktops offered twice per year at rates up to 61% off ADMC-2 contract prices plus an additional 7% off GSA yielding a cost avoidance of over \$325M since its inception in 2005. Other offerings through suites of contracts offer up to a 45% discount from commercial catalog prices for servers, storage systems, networking equipment network printers, scanners, support devices, video equipment products, peripherals and incidental services. CHES contracts do not have a usage fee, in contrast to other DOD and Federal vehicles. On average, other contracts fees could cost the Army \$7.5M for every \$1B spent, which based on the CHES spend per year could equate to about \$21M a year in fees alone. Additionally, to keep pace with changes in technology and meet worldwide requirements of the Army and other agencies, the CHES contracts provide and will continue to provide for new technologies and refresh the catalog product offerings. IT products offered through CHES contracts are required to comply with DOD and Army standards, policies and procedures and will continue to do so including

**Department of the Army Overview**

---

as standards, policies and procedures as they evolve (e.g. Unified Gold Master, Trade Act Agreements). Current contracts and future contracts will continue to factor in use of Army and other agencies requirements allowing Government customers the ability to tailor to specific needs within the confines of commerciality and standards, policies and procedures.
